

Natural Gas Generators

Clean · Efficient · Reliable. Gas. It's a Natural.™

THE NATURAL GAS ADVANTAGE

You don't have to lose all the comforts of home just because the electricity goes out. A standby natural gas generator can keep your lights and appliances up and running as long as the electricity failure lasts. Fully automatic, dependable and economical, natural gas generators give you a powerful advantage.

Typically, Georgia experiences 10 to 20 major power outage events each year due to weather with 10,000 to 25,000 customers affected during each occurrence. While the majority of customers are not usually without power for more than four hours, depending on how severe the damage is, it can take much longer – up to several days - for power to be completely restored. That's when having a natural gas generator is beneficial.

Natural gas is supplied to the generator from the line that delivers gas to your water heater, furnace and other gas appliances. Models are available in a variety of sizes from 5 KW (Kilowatt) to 60 KW to match your electrical load. Built with heavy-duty industrial design engines, natural gas generators are durable and dependable.

Natural Gas Generators

- Automatically sense loss of power and give you electricity in 30 to 60 seconds
- Operate as long as the electricity is out
- Are permanently installed
- Provide power to several appliances at once or to the entire home
- Do not require storage of potentially dangerous fuels, such as gasoline or diesel fuel
- Have built-in safety shutoff features to protect against engine damage from low oil pressure or overheating
- Have factory-installed weatherproof housing for safety and quiet operation
- Cost 40-50 percent less per hour to run than gasoline-powered models

- Have a weatherproof and sound-attenuated enclosure that provides added sound reduction and safety
- Are clean burning and environmentally friendly
- Can last over 20 years if properly maintained

The Comfort Advantage

- Your natural gas generator will keep you gas furnace, refrigerator, security system, lights, computers and electronic entertainment equipment up and running as long as the electricity is out
- Even if you're not at home or if you're asleep when the electricity goes out, your home is automatically secure and your appliances are running as they should
- If you have health problems that require special equipment, a natural gas generator gives you the same security during an electrical outage as systems used in hospitals or critical care facilities
